

# Simplifying Your Software Delivery Toolchain with GitLab

Implement a fully integrated software toolchain on Amazon Web Services (AWS).

Utilize automation to build and deploy high-quality and secure applications.

Gain granular visibility to eliminate unnecessary and time-consuming activities.

## Why This Matters

Widespread adoption of agile methodologies has altered the competitive landscape for all organizations that depend on software.

GitLab provides a complete code repository and DevOps platform, delivered as a single application. Cloud-delivered code development and integrated software toolchain services enable delivery of high-quality, secure applications.

With AWS Marketplace's streamlined deployment for GitLab Ultimate, you can quickly gain visibility, insight, and control of your software development and delivery.
